Suzanne Scoles
Wiley Author Services
E-mail: rightsdeeds@wiley.com

Manuscript Submission: Experimental Dermatology is only accepting manuscripts electronically via an online submission and review system called Manuscript Central. Upon submission, your manuscript will be assigned a case number and a peer review site will upload the time to decide, enable immediate distribution and allow authors to track their manuscripts. To access this system for submission and review, go directly to http://mc.manuscriptcentral.com/ed.

Manuscript Central enables authors to track their article in automated e-mails at key stages of production so they don’t have to wait for telephone or e-mail reports. Authors can check the status of their articles online and choose to receive automatic e-mails at any step in the production process. Authors must also ensure that their manuscripts conform to the instructions on style and format for the type of article they are submitting. Please visit the Wiley Author Licensing Service (WALS). If you have any queries, please contact the Production Editor.

Copyright: Your manuscript will be copyrighted under the title of your article. Authors submitting a paper do so on the understanding that the work has not been published before, is not being considered for publication elsewhere, is not under consideration for publication elsewhere, and that it will not be published elsewhere in any language, in any form, electronic or mechanical, including photocopying or microform, or in any public presentation. Authors must sign a copyright assignment agreement before their manuscripts can be published. Authors may use their own work elsewhere after publication provided that the original Wiley publication is acknowledged. Please refer to the Wiley Author Licensing Service (WALS) for the appropriate forms.

Typesetting: Authors are strongly encouraged to emphasize the clinical relevance of their work. In original papers, at least the final paragraph of the paper should include a discussion of the potential clinical relevance of the presented findings, whenever this makes sense.

Cover Letter
All submissions must be accompanied by a short cover letter, which contains the following information:

a) the appropriate area of classification for which the manuscript is being submitted
b) statement whether this is an unsolicited submission or has been invited by one of the editors, associate editors or editorial board members (name)
c) statement that the appropriate guidelines for this publication category have been fully respected (or, if not, justify why this has not been done)
d) brief, but instructive explanations in which explains why the cause of the submission is available at the website of experimental animals and contain a statement indicating that the procedures have been approved by the appropriate institutional animal care and use committee. If authors study has been approved by a local institutional review board, a statement must include the name of the appropriate institutional review board.

Page Charges: Articles should not exceed 7 printed pages (approx. 4,000 words). Additional pages must be paid for at the rate of $85 per half a page.

Manuscript Format: All manuscripts must be submitted in English. Manuscripts intended for the journal must be typewritten on white paper, double spaced throughout (including tables, footnotes, and references). The letterhead of the author’s institution or base should be submitted as a separate page. A word count should be included. The title of the article should be clear and concise, with no abbreviations, symbols, or acronyms.

Abstract: The abstract or summary must be placed immediately following the title. It should comprehensively outline the purpose and content of the article, and must not exceed 250 words. The abstract should provide a succinct presentation of the main results and conclusions of the study, and should not contain any references, formulae, or abbreviations.

Introduction: The introduction provides a background and context for the research, and should not exceed 400 words. It should outline the aims and objectives of the study, and should not duplicate the abstract.

Methods: The methods section should describe the procedures and protocols used in the study, and should not exceed 1,000 words. It should provide sufficient detail to allow other researchers to replicate the experiments. All methods must be described clearly and concisely, and should be presented in a logical sequence.

Results: The results section should present the data collected during the study, and should not exceed 1,000 words. It should be presented in a logical and organized manner, and should be supported by appropriate figures and tables.

Discussion: The discussion section should interpret the results in the context of the existing literature, and should not exceed 1,000 words. It should address the implications of the findings, and should discuss the significance of the results.

Conclusion: The conclusion section should summarize the main findings of the study, and should not exceed 250 words.

References: Only references that are directly relevant to the paper should be included. They should be numbered consecutively in the order in which they are first mentioned in the text, and should be cited in the text using superscript numbers. The reference list should be formatted in accordance with the AMA Manual of Style. A list of recent publications should be included as part of the reference list. Only peer-reviewed articles should be included.

Figure Legends: All figures should be numbered sequentially, and should be cited in the text. Figure legends should be included in the manuscript file, and should provide a description of each figure.

Tables: All tables should be numbered sequentially, and should be cited in the text. Table legends should be included in the manuscript file, and should provide a description of each table.

Acknowledgments: Acknowledgments should be included in the manuscript file, and should acknowledge any support or assistance provided by others.

Proofs: The corresponding author will receive an email alert containing a link to the web site. A working e-mail address must therefore be provided for the corresponding author. The proof will be downloaded as a PDF (portable document format) file and can be edited using a web-based tool. The author should check the proofs carefully and make any necessary corrections. The proofs should then be returned to the publisher, who will make any necessary changes and send the final proofs to the author. The proofs will be checked for accuracy and any necessary changes will be made before the final proofs are sent to the author.

Electronic Submission: All manuscripts should be submitted electronically via Manuscript Central. Manuscripts should be submitted in PDF format and should be accompanied by a cover letter. Manuscripts should be submitted as single pdf files, and should not exceed 5MB in size. Manuscripts should be submitted in English, and should be formatted in accordance with the AMA Manual of Style. Manuscripts should be submitted as single pdf files, and should not exceed 5MB in size. Manuscripts should be submitted as single pdf files, and should not exceed 5MB in size. Manuscripts should be submitted as single pdf files, and should not exceed 5MB in size.
Methods Review
A primer for studying cell cycle dynamics of the human hair follicle

Viewpoint
Any route for melanoblasts to colonize the skin!

Commentaries
The role of Syk in cutaneous lupus erythematosus
Pro-inflammatory sebocyte growth and survival signalling in acne vulgaris are reversed by pro-apoptotic isotretinoin signalling
